

Medicine Reminder App

Amir Khan

Project overview

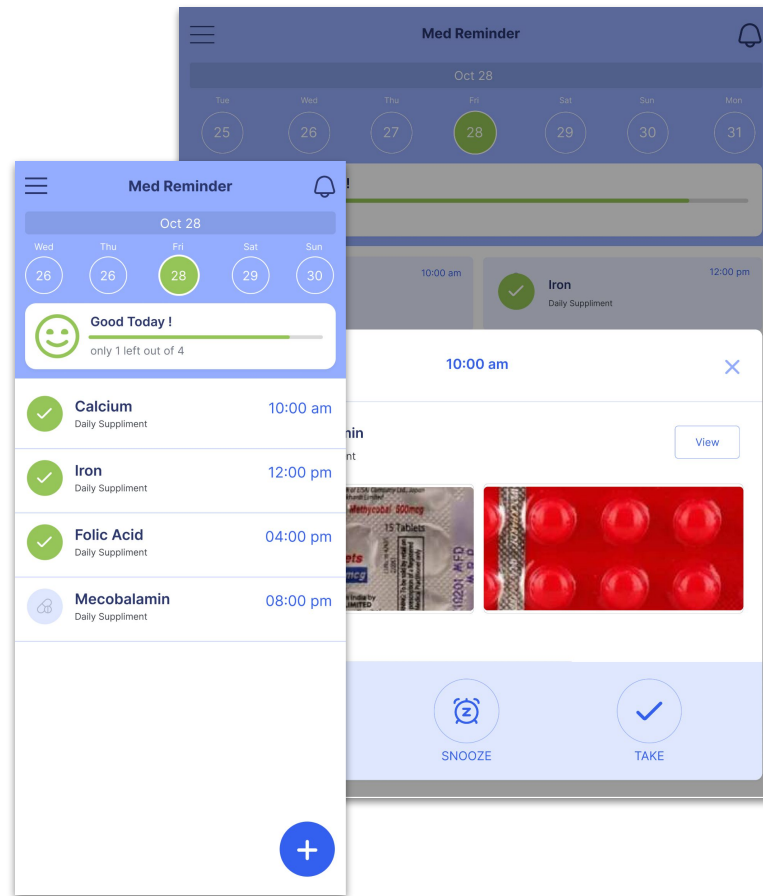

The product:

The Medicine Reminder App is designed for the users Who generally take medicines/pills and want to set Reminder so that no medicine/pill misses

Project duration:

Oct 2022 - Nov 2022

Project overview

The problem:

Sometimes people forget to take medicine or miss the time when to take medicine and sometimes what medicine is to take.

The goal:

To provide a design so that people can set a reminder of when to take medicines/pills and what medicines/pills are to take.

Project overview

My role:

UX Designer

Responsibilities:

User Research, Wireframing, High Fidelity Design, Interviews, Usability Study

Understanding the user

- User research
- Personas
- Problem statements
- Competitive audit
- Ideation

User research: summary

I conducted interviews and created empathy maps to understand the users I'm designing for and their needs. A primary user group identified through research was any users who want to use the app to set a reminder.

This user group confirmed initial assumptions about users, but research also revealed that time was not the only factor related to set a reminder but also What medicines are to take.

Persona 1: Name

Problem statement:

Ramu is a Retired old aged man with low memory who needs To get reminders of taking medicines because He forgot to take medicines many times.

Ramu

Age: 72 years

Education: Metric

Hometown: Jaipur

Family: Wife, Son, Daughter in-law, Grand Children

Occupation: Retired Shopkeeper

"Things should be simple and systematic"

Goals

- Want to keep unordered day routine
- Want to keep medicines records he takes
- Want to get reminder when to take medicine

Frustrations

- Low memory is frustrating
- He doesn't know what medicine taken and what not
- Many time he forgets to take medicines

Ramu is a retired shopkeeper and spends time with his family at his home mostly. At the age of 72 years, he suffers from low memory so he can't remember most things like taking medicines on time. Many times he skips taking required medicines. Many times he doesn't know what medicine has to take and what not. Living with a working family he wants to get reminders of his own and keep a record of what he has taken and what not.

Persona 2: Name

Problem statement:

Sweta is a Busy and working manager who needs To get reminders of taking medicines because During busy day she skips taking medicines.

Sweta

Age: 40 years
Education: B.Com
Hometown: Delhi
Family: Son, Daughter in-law, Grand Children
Occupation: Financial Manager

“Things should be well managed, timely and dedicated”

Goals

- Want to keep well managed day
- Want to get reminder when to take medicine
- Want to schedule each medicine according to day period

Frustrations

- Busy and working day is hectic for her
- She skips medicine many times

Sweta is a working woman. She spends most of her time in the office or dealing with clients. She has a hectic and busy schedule of a day. Many times she forgot or skips taking medicines on time. She wants to get the reminder and wants to schedule medicines according to day periods.

Competitive audit

Competitive Audit prepared
Of competitors that shows
How they offer and
What they offer

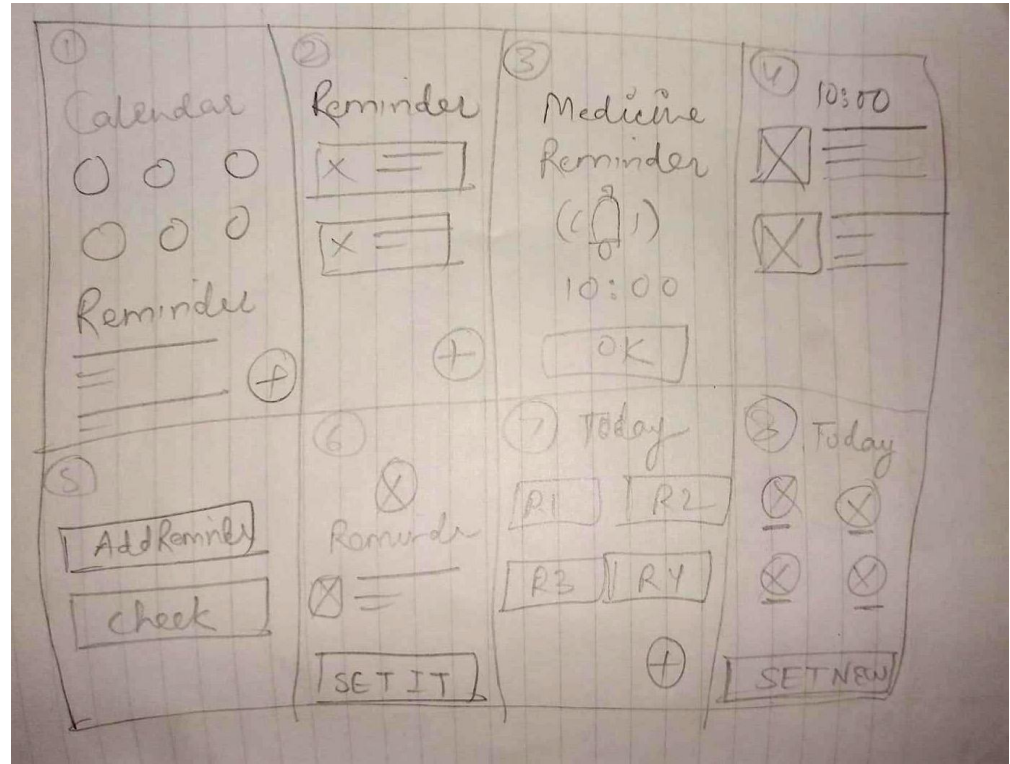

Competitive audit Goal: Compare the user experience of each competitor's app								
General information								
	Competitor type	Location	Product offering	Price	Website	Business size	Target audience	Unique value proposition
Medisafe Medicine Reminder	Indirect	Boston, MA	Health tracker & reminders	\$100/year	https://play.google.com/store/apps/details?id=com.medisafe.reminder&hl=en_US&gl=US	Large	Global	Complete health tracking solutions
Cute Pill by Futasa LLC	Direct	Japan	Pills reminder	\$59/year	https://play.google.com/store/apps/details?id=net.futasa.medicine	Medium	Needy	Traditional pills reminder
Medica App	Direct	Gulf	Pills reminder	\$39/year	https://play.google.com/store/apps/details?id=com.fawa.medicaremindere	Small	Global	Conventional pills reminder

UX (rated: needs work, okay, good or outstanding)								
First Impressions			Website Interaction					
Desktop website experience	Mobile website experience	Features	Accessibility	User flow	Navigation	Brand identity	Tone	Descriptiveness
Good + Visually appealing + Feels dense and overwhelming in places	Good + Fully responsive + Interaction was not as smooth on mobile	Good + Online ordering feature + "Create account" feature	Good + Website available in two languages + Images of menu items are clear and legible + Menu isn't compatible with screen reader technologies	Good + Easy to find key info (menu, location, hours) + No clear hierarchy, difficult to scan quickly	Outstanding + Easy to navigate + Clear indication of clickable elements	Good + Clear color scheme, font, and art direction + Inconsistent use of imagery and photography	Serious and direct + Friendly in some places	Good + All key info is present + Too descriptive
Okay + Welcoming and easy to use + Feels dense and overwhelming in places	Good + Fully responsive + Animations added to enhance the mobile experience + Menu is hard to read	Okay + "Create account" feature + Users have to download PDF of menu to open it	Needs work + Website only available in English + Users have to download PDF of menu and is hard to read	Okay + Easy to find the menu + Needed to search to find hours + Home page is too busy	Okay + Somewhat difficult to navigate + Some elements seem clickable but are not	Needs work + No brand identity at all	Friendly and indirect	Okay + All key info is present + Unnecessary details
Outstanding + Fun and easy to use + Engaging animations (same as desktop) + App can be downloaded to collect points	Outstanding + Fully responsive + Engaging animations (same as desktop) + App can be downloaded to collect points	Outstanding + "Create account" feature + Store locator feature + Online ordering feature with pickup/delivery options	Needs work + Website only available in English + Menu isn't compatible with screen reader technologies	Okay + Fun to use + Difficult to find key info (menu, location, hours) due to animation load time	Needs work + Difficult to navigate due to big animation size + Unfamiliar way to navigate	Outstanding + Strong brand identity, including colors, font, style, motion, imagery, and photography	Fun and indirect	Outstanding + Short and to the point

Ideation

I did the ideation process to find out how we can solve the issue and bring a good idea.

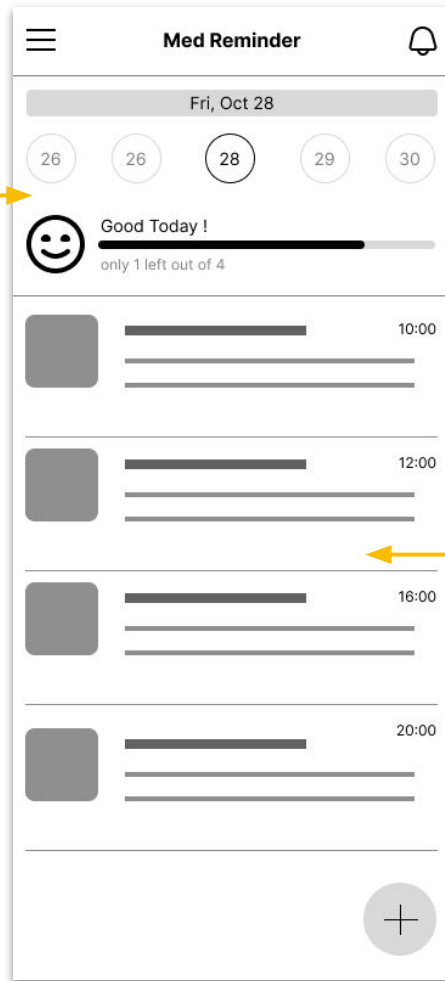

Digital wireframes

Medicine Reminder Home

Screen shows the list of all the reminders of the day selected

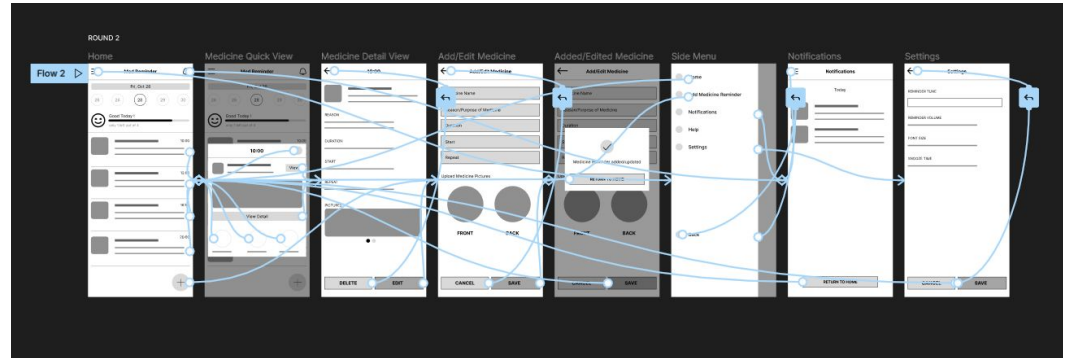

Calendar according to day/date
And overall statistics of reminders

Medicine Reminders

Low-fidelity prototype

Usability study: parameters

Study type:

Unmoderated usability study

Location:

India, remote

Participants:

5 participants

Length:

30-60 minutes

Usability study: findings

Insert a one to two sentence introduction to the findings shared below.

1

Finding

Need view detail on
prompt

2

Finding

Need customized settings
of reminder and alarm

3

Finding

Need to check previous
reminders

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

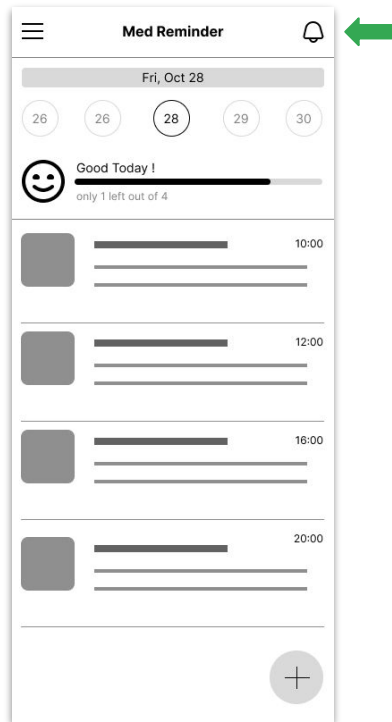

Mockups

Accessibility considerations

1

Text size adjustments
settings added

2

Users motivation feature
added on the home
screen so it can motivate
to take pills on time

3

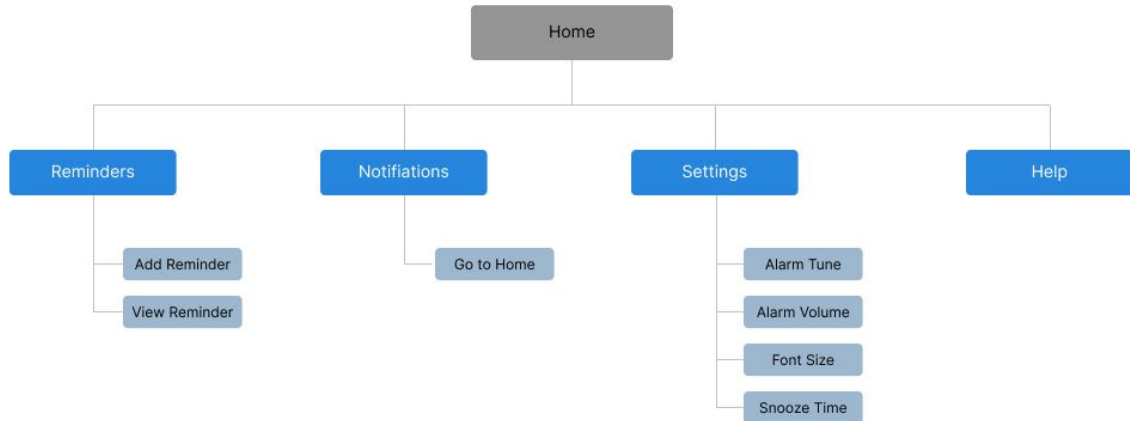

Customizable audio
feature added to the app

Responsive Design

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

The app makes users feel like truly reminder of medicines/pills, really thinks about how to meet their needs.

One quote from peer feedback:

“The application flow is so easy and intuitive and the concept is nice”

What I learned:

While designing the Medicine Reminder App, I learned

that the first ideas for the app are only the beginning of the process. Usability studies and peer feedback influenced each iteration of the App's designs.

Next steps

1

Conduct another round of usability studies to validate whether the pain points users experienced have been effectively addressed.

2

Conduct more user research to determine any new areas of need
